- ✓ METAL DETECTABLE
- ✓ INCREASE SAFETY
- ✓ REDUCE RISK

DETECT-A-GLOVE

CK Safety's unique patent protected METAL DETECTABLE GLOVE. The answer to contaminated risks, food hygiene, and operator hand protection. This premium quality 5 mil powder free metal detectable vinyl glove, combines comfort with product safety. The patented CK "Detect-a-glove" meets FFDC requirements for food contact. The gloves are in full compliance with FDA regulations for use in contact with food at temperatures up to 40 (degrees) Celsius.

Engineered to ensure food line detectability combining operator comfort and safety. "Detect-a-glove" vinyl is uniquely detectable in the electromagnetic range 50Khz—1Mhz, ensuring that a small torn piece will not pass through metal detectable equipment and contaminate or end up in the final product bought by the consumer.

**"Detect-a-glove" is powder free to avoid corn powder contamination or allergies.
Rolled cuff for strength and durability**

In a world where Hygiene and safety, to avoid food contamination from bacteria's (for example E-coli) are top priorities, food manufacturers can, for the first time, provide their employees with a glove that will be detected should it, or pieces of it, fall into a food product.

There are over a million cases of food poisoning in the world each year. The most common illnesses are caused by just a handful of bacterial culprits. The use of food safe gloves when handling food is one way of controlling the risk of spreading bacteria from your hands to food.
